

AATISH KUMAR

Senior Full-Stack Engineer · React · Node.js · TypeScript · Python · AWS · Docker
minhasaatish@gmail.com · +91-82196 70817 · Mohali, Punjab · Remote-Ready · LinkedIn · GitHub · aatish.dev

PROFESSIONAL SUMMARY

Senior Full-Stack Engineer with 6+ years delivering production-grade web applications across React, Next.js, TypeScript, Node.js, FastAPI, and PostgreSQL. Proven track record owning end-to-end delivery — from database schema design and REST API architecture through performant frontends serving tens of thousands of users. Experienced with AWS (EC2, S3, Lambda), Docker-based deployments, CI/CD pipelines, and application security practices. Strong focus on code quality through automated testing (Jest, Mocha) and security scanning (SonarQube, AWS Inspector). Additional hands-on experience integrating LLM APIs (GPT-4, Claude, Gemini) into enterprise products. Available for remote engagements globally.

TECHNICAL SKILLS

Frontend: React.js · Next.js · TypeScript · Redux · Context API · Tailwind CSS · Material UI · SPA / PWA
Backend: Node.js · Express.js · FastAPI · Python · REST API Design · API Caching · Background Jobs · Redis
Databases: PostgreSQL · MongoDB · MySQL · Data Modelling · Schema Design · Query Optimisation
Cloud & DevOps: AWS (EC2 · S3 · Lambda · Inspector) · Docker · CI/CD Pipelines · Git · Infrastructure Rightsizing
Testing & Security: Jest · Mocha · Chai · SonarQube · Test Automation · Security Scanning · Vulnerability Remediation
AI Integration: OpenAI GPT-4 · Claude API · Gemini API · RAG Pipelines · Prompt Engineering

PROFESSIONAL EXPERIENCE

Senior Software Engineer LeewayHertz (A Hackett Group Company) Dec 2024 – Present | Remote

ZBRAIN AI Platform · Quantadoc · HRJD Builder

- Built and shipped production React frontends for AI-powered document interaction platforms — translating complex LLM backend workflows into intuitive, responsive product interfaces.
- Engineered FastAPI backend services handling enterprise document ingestion, semantic retrieval, and LLM API orchestration (GPT-4, Claude, Gemini) integrated into scalable REST endpoints backed by PostgreSQL and vector stores.
- Optimised vector retrieval queries and API response pipelines — achieving 15–20% reduction in end-to-end API latency across production AI workflows.
- Resolved AWS Inspector security findings and rightsized EC2/Lambda resource allocation — improving security posture and reducing infrastructure overhead.
- Established Jest, Mocha, and Chai automated test coverage for shared service modules; integrated SonarQube for continuous code quality and security scanning.
- Managed Docker-based deployment pipelines and CI/CD workflows — ensuring reliable, repeatable production releases.

Full Stack Developer Appinventiv Apr 2022 – Sep 2024 | Chandigarh

End-to-end delivery across 5+ enterprise web products

- Owned full technical delivery of 5+ enterprise web applications — leading architecture, development, and production deployment across React, Next.js, TypeScript, Node.js, Express.js, PostgreSQL, and MongoDB.
- Engineered high-performance React / TypeScript frontends — achieving ~30% reduction in page load times across applications serving 10,000–50,000 monthly active users.
- Designed scalable REST API architectures and database schemas from inception on 3+ greenfield projects — covering data modelling, endpoint design, validation logic, API versioning, and query optimisation.
- Deployed applications on AWS (EC2, S3) with Docker containers and managed CI/CD pipeline configuration — ensuring consistent, zero-downtime production releases.
- Built reusable React component libraries and shared design system patterns that accelerated UI delivery velocity across parallel product teams.
- Conducted ongoing code reviews, enforced SonarQube quality gates, and maintained automated test suites — contributing to measurably lower post-release defect rates.

Full Stack Developer **Digimantra Labs** Jan 2020 – Mar 2022 | Mohali, Punjab

End-to-end client project delivery

- Led full technical delivery of 4+ client projects — owning architecture decisions, database design, cloud deployment, and stakeholder communication.
- **Built responsive React frontends backed by Node.js RESTful APIs — achieving ~20% reduction in average page render time** through component-level performance optimisation.
- Managed AWS deployments and maintained secure, production-grade application environments across concurrent client engagements.
- Mentored junior developers, led code reviews, and enforced testing standards — raising engineering quality across active projects.
- **Awarded Star Performer (2021–2022)** among 30+ engineers for consistent on-time delivery and technical quality.

Trainee Web Developer **Innow8 Apps** May 2019 – Dec 2019 | Mohali, Punjab

- Shipped 10+ REST API endpoints in Node.js / MongoDB and built React / Redux UI modules for Admin Portal and Food Club products.
- **Delivered an Admin Portal that improved internal team productivity by ~40%** through streamlined UX and optimised data workflows.

KEY PROJECTS

MCP Server — LLM Tool Integration · Personal Engineering Project · GitHub

- Designed and implemented a Model Context Protocol (MCP) server from scratch — building tool registration, request routing, and protocol handling to connect LLM clients to external tool services.

Quantadoc — Full Stack Document AI Platform · LeewayHertz

- Delivered a full-stack document AI platform — engineering the FastAPI semantic retrieval backend (PostgreSQL + vector stores) and React frontend for interactive AI document workflows.

EDUCATION

B.Tech – Computer Science Indira Gandhi Institute of Technology and Management, Sohna, India · 2016 – 2019

Diploma – Computer Science & Engineering Govt. Polytechnic Hamirpur, Hamirpur, India · 2013 – 2016
